

Appendix 3: Results on coordination of NPs

Table 9: Statistics of the recall experiment (coordination).

Model formula: Response ~ Animacy * WordOrder+ (1 | Participant)

RANDOM EFFECTS		VARIANCE	STD. DEV	
Participant	Intercept	0.10	0.33	
FIXED EFFECTS				
PREDICTORS	COEFFICIENT	STD ERROR	WALD Z	<i>p-value</i>
Intercept	1.31	0.16	8.07	<0.001
Animacy	0.20	0.27	0.72	0.47
WordOrder	-0.12	0.28	-0.43	0.67
Animacy:WordOrder	0.11	0.56	0.20	0.84

The statistical model is displayed in Table 9. Fixed effects were coded with contrasts -0.5 for animate arguments and 0.5 for conditions with NP2 as an inanimate NP, and -0.5 for NP1-NP2 order and 0.5 for NP2-NP1 order. Due to convergence issues, only the random intercept for participants was included in the model.
